

# the **INCLUSIVE CITIZEN CONSULTATION**

Picture this: You're reading about a new traffic plan proposal on your **citizen app**, a platform where residents actively interact with city projects. Thousands of opinions are **pouring in** — everyday commuters, environmental advocates, parents, scientists — and **every voice matters**. This isn't the distant bureaucracy we're used to; this is participatory governance at its finest.

**INTERESTED?**

# IT ALL BEGINS WITH...

*...citizens taking the initiative.*

A group of randomly selected citizen representatives self-organizes to transform **raw citizen input** into **actionable ideas**.

**Input** flows in from **everywhere** - citizens giving feedback via an **app**, seeing advertisements on public transport, or scanning a QR code while waiting at the local clinic.

**Artificial intelligence** steps in, not as a faceless decider, but as a **tool for the group's vision**. AI clusters this massive influx of citizen opinions into discernible themes—transparency embedded at every step.

With the help of experts, these themes are refined into various potential models for solutions.

These models go back to the citizens, shared through public assemblies and the app for feedback. **Everyone gets to have their say.**

Then, guided by the consultation group, the final design or plan takes shape.

These are not the tired old gears of bureaucracy, but a dynamic back-and-forth administering **real change implemented through citizen participation.**

## THE APP MAKES SURE...

...that progress is monitored and tracked transparently.

Criticism is not stifled - it is **embraced and incorporated.**

Accountability is no longer optional - it's **baked into the core of governance.**

With citizens at the forefront, alongside experts and decision-makers, solutions don't just serve one agenda—they reflect a **collective vision.**

Imagine what other challenges—transitioning to sustainable energy, managing rising sea levels—could be approached with this model.

Cities that listen, engage, and act boldly can transform societies.

**WOULD YOU TAKE PART IN THIS CONSULTATION?**
